EXPORTS...

. . . their importance to the United States economy

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter— currently selling $200 billion of U.S. goods abroad— and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per $1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about $6 billion of their products annually, an additional $21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for $1 of every $4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living— and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to $57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Wyoming Export Highlights

Wyoming's exports of manufactures totaled $18 million in 1981, 192 percent above the 1977 value. They rose faster than production.

An estimated 500 jobs in Wyoming were directly or indirectly related to producing manufactured exports in 1981. These jobs accounted for one out of every twenty-two manufacturing jobs in the state.

Wyoming's share of U.S. agricultural exports totaled $95 million in FY 1982, two and a half times the FY 1977 value. In Wyoming's farm sales, $1 of every $6 came from exports.

Major Wyoming mineral exports were soda ash and clay.

Manufactured exports soared

Wyoming's exports of manufactures totaled $18 million in 1981. Although the state was the smallest U.S. exporter of manufactures, its overseas sales tripled after 1977. Export growth outpaced the 146 percent increase in Wyoming's shipments of manufactures from 1977 to 1981.

Exports were divided among several industries of which nonelectric machinery, stone/clay/glass products, and food products combined accounted for about half of the total export value from the state.

About $3 million worth of nonelectric machinery was shipped abroad; this represented 3.4 percent of production in the state's industry. Foreign sales of food manufactures were also valued at $3 million in 1981. These sales amounted to one percent of food manufactures total production value.

Stone/clay/glass products were Wyoming's second largest export value, an estimated $3 million. The exact value of these sales abroad were withheld to avoid disclosure of individual companies' data. The state's largest manufacturing industry, petroleum and coal products, exported an estimated $2 million worth of products. The amounts the lumber and wood products and chemicals industries sent to foreign destinations were also about $2 million each in 1981.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Wyoming's export figures for manufactures including the output of the supplying establishments that furnish parts and materials to the manufacturers producing goods in final form for export. Such indirect exports are particularly important in industries whose products require further processing such as chemicals, petroleum/coal products, and fabricated metal products and also in those industries whose products constitute components and parts for assembly into machinery and electric equipment.

The Census Bureau has estimated that the full impact of U.S. exports on Wyoming's manufacturing activity was 5.6 percent rather than the 0.6 percent attributable to direct exports as shown in table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 7 percent—$1 out of every $14—was due to export-related shipments.

Vegetable exports expanded

Wyoming's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated $95 million, 2 1/2 times the FY 1977 level. The state's leading export in FY 1982 was wheat and flour valued at $25 million. Overseas shipments of vegetables increased to $20 million in FY 1982 from $1 million in FY 1977. Meats and hides were among the other major farm products delivered to foreign markets.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 35 percent of the rise in farm sales and added substan-

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled $28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Wyoming *					
1976	10	0.2	2.9	(1)	--
1977	6	0.2	2.4	2.4	1.3
1980	16	0.5	4.9	4.6	2.0

TABLE 2

Wyoming Growth in Manufactured Exports

- In 1981, Wyoming's manufactured exports totaled $18 million, three times the 1977 value.
- The increase stemmed in part from growth in nonelectric machinery, stone/clay/glass products, and lumber exports.

Industry group	Export value (million dollars)					Percent increase from 1977 to 1981		Export increase as percent of production increase 1977-81

* Exports reflect shares in national exports according to each state's production. [1] Commercial sales plus net Commodity Credit Corporation loans and purchases under price support programs. [2] Includes exports that were not apportioned among states. [3] Less than $500,000. [4] Not available. [5] Less than $100,000. -- Not applicable.

TABLE 6

Wyoming Manufactured Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 22 Wyoming jobs in manufacturing are due to exports.
- Three industries—petroleum/coal products, nonelectric machinery, and lumber—accounted for 60 percent of Wyoming's export-related jobs in manufacturing.

Industry group	Production (million dollars)	Export-related manufactures (million dollars)	Export related as percent of production	Employment for export-related manufactures (thousands)	Employment for export related as percent of total employment
Total [1]	3,164	180	5.6	0.5	**4.4**
Petroleum and coal products	2,275	113	4.9	0.1	**7.6**
Chemicals and allied products	164	26	15.6	([2])	**([3])**
Machinery, except electric	96	9	9.0	0.1	**7.1**
Food and kindred products	283	9	3.0	([2])	**([3])**
Lumber and wood products	74	7	9.6	0.1	**4.5**
Stone, clay, and glass products	([1])	6*	--	([1])	--

Leather and leather products	([1])	([1])	--	([1])	--
Primary metal industries	([1])	([1])	--	([1])	--
Electric and electronic equipment	([1])	([1])	--	([1])	--

[1] Total includes estimated production and export-related values, and employment numbers which are withheld for certain industry groups to avoid disclosure of individual companies' data. [2] Less than 50 employess. [3] Less than one-half of one percent. [4] Less than $500,000. -- Not applicable. * Partly estimated.

TABLE 7

Wyoming Growth in Export-Related Manufactures

- The 320 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- Almost one-fourth of the increase in chemicals production was generated by growth in export-related manufactures. Lumber production for domestic use was outpaced by export-related shipments.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Production

[2] 1976. [3] 1976-1981. [4] Less than one-half of one percent. [5] Less than $500,000. -- Not applicable. * Partly estimated.
Note: Totals include values for industry groups which are not shown separately.

TABLE 8

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures				Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports	
		1977 (million dollars)	1981 (million dollars)	Percent increase from 1977 to 1981	Percent of state production 1981		(thousands)	Percent of civilian employment

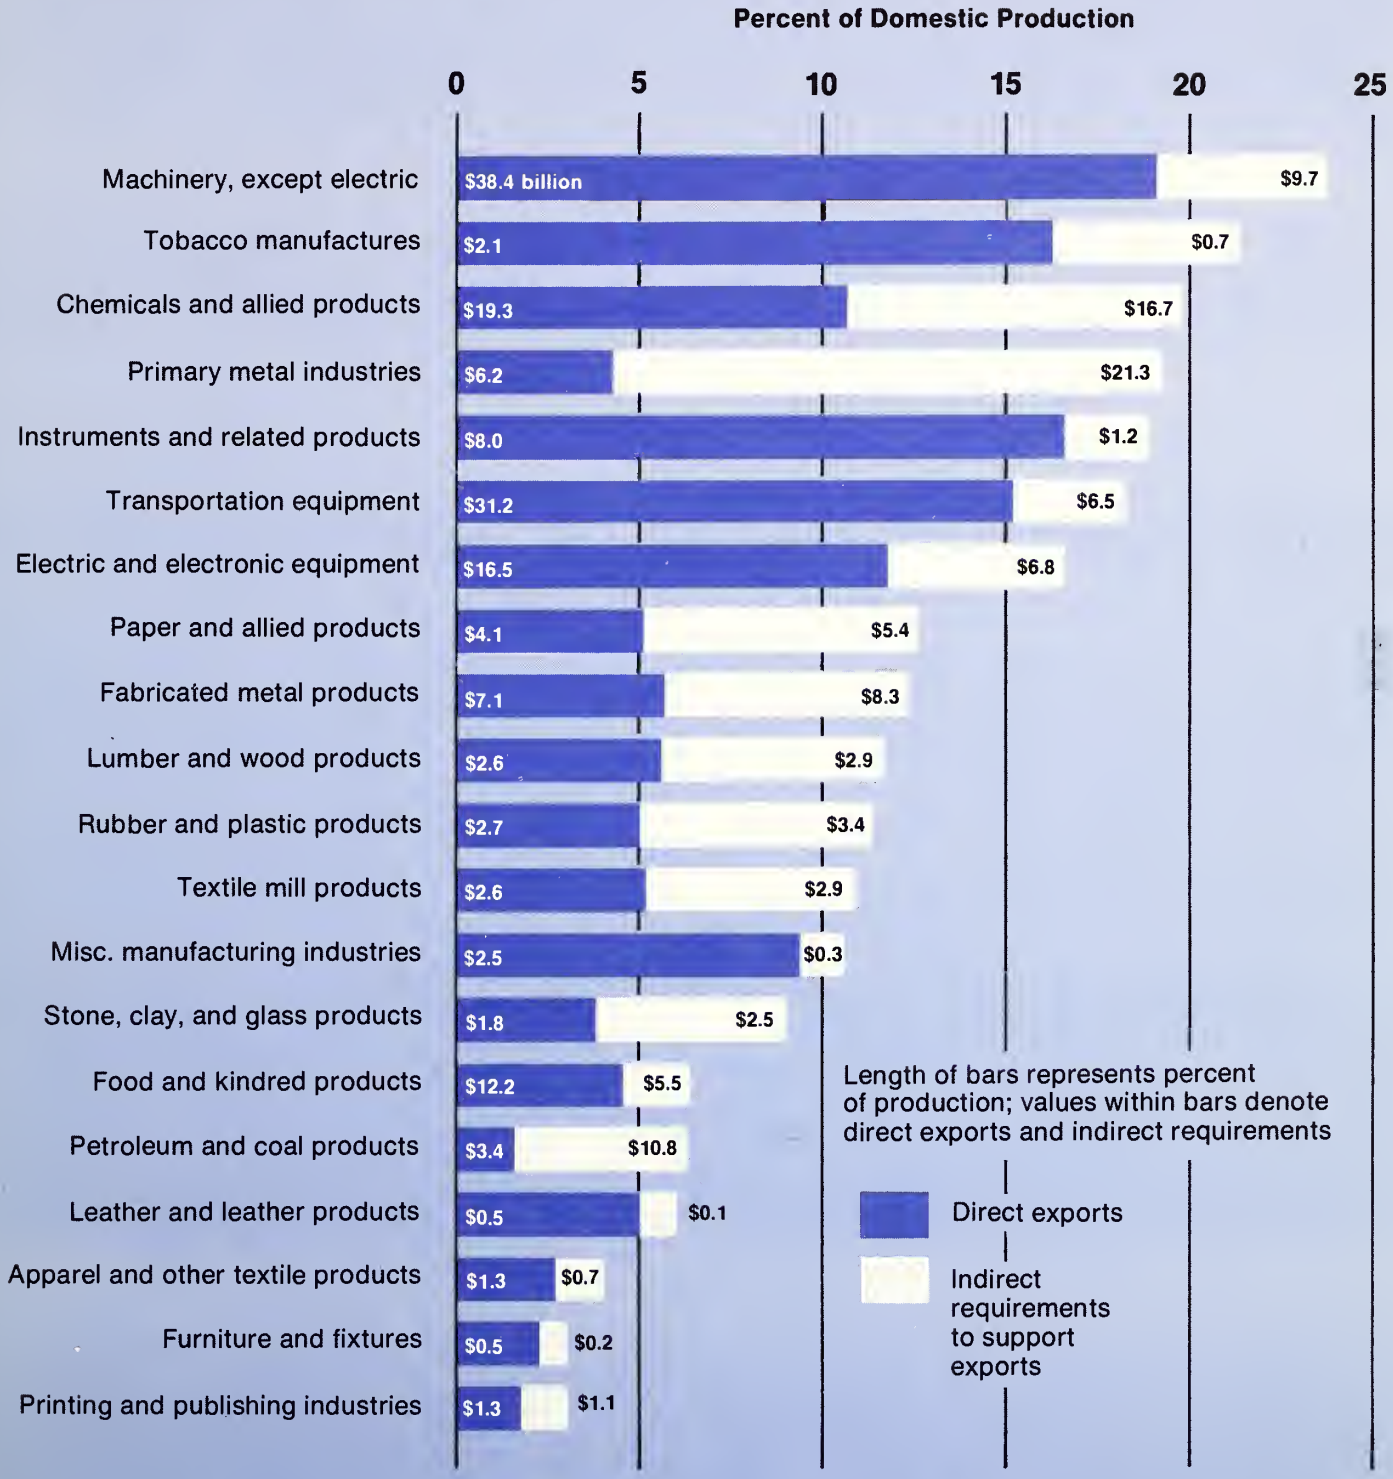
Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports



Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

tially to the income of Wyoming farmers. In this period, the export contribution to each dollar of the state's farm sales increased from 9 cents to 16 cents.

Leading exporter of soda ash

Wyoming is the leading producer and exporter of natural soda ash in the United States. U.S. exports of this product and similar synthetic material were valued at $121 million in 1981. It is not possible to separate the value of the natural from the synthetic product. Wyoming exported most of the natural soda ash. The state also was one of the largest exporters of bentonite clay, which is used principally in iron ore pelletizing, in foundries and steelworks, and in drilling mud. Wyoming's foreign sales totaled $14.4 million in 1981 compared with $6.6 million in 1976. The quantity of bentonite exported however increased by one-fourth, but price per ton was 76 percent greater.

Exports provided employment

Wyoming's $18 million worth of manufactured exports provided direct employment for fewer than 50 workers in 1981. In addition, an estimated 500 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, about 500 jobs in Wyoming were directly or indirectly dependent on exports of manufactured goods. These jobs represented 4.4 percent of all manufacturing employment in the state.

Three-fifths of the jobs dependent on manufactured exports were concentrated in the petroleum/coal products, nonelectric machinery, and lumber industries. These jobs accounted for one out of thirteen/fourteen jobs in the petroleum/coal products and nonelectric machinery industries and one out of twenty-two jobs in the lumber industry.

An additional 4,600 jobs were generated in nonmanufacturing industries that supply materials and services supporting manufactured exports. About a third of these jobs were in warehousing, transport, and other foreign trade-related services. Wyoming's total employment related to exports amounted to 5,100.

It is estimated that Wyoming's farm employment related to exports in 1982 amounted to about one out of every six farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures,* M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for $2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
